

# GreenStake®

The toughest stake in the land

PLASTIC-FREE makes it  
**100%**  
biodegradable

## Use GreenStake® to:

- Anchor erosion control fabric
- Pin down sod and mulch mats
- Secure landscape fabric and netting

- Safe** - Safer than metal staples for people and machines
- Effective** - Works for over 18 months before biodegrading completely
- Strong** - Our 4" (10cm) stakes have 45% more holding power than 6" (15cm) metal staples
- Biodegradable** - Completely biodegrades when the job is done
- Efficient** - No need return to site to remove – just let them biodegrade naturally
- Tough** - Really tough and can penetrate the hardest ground
- Certified** - Complies with ASTM D6400 and EN13432
- Approved** - Specified by governments, engineers, conservation bodies and DOTs

### Available sizes

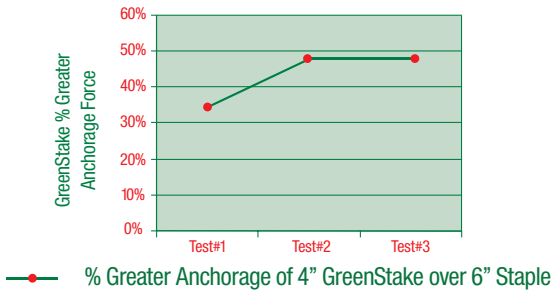

- 4"(10cm) - 500/box
- 6"(15cm) - 500/box

### Better for the environment

A GreenStake is 100% biodegradable. That means it breaks down completely to carbon dioxide, water and humus, just like compost (degradable stakes contain plastics and do not conform to ASTM D6400). Use them and forget about them - they'll keep gripping for over 18 months before completely disappearing.

### Better for the job

A 4" (10cm) GreenStake has 45% more anchorage power than a 6" metal staple thanks to a larger surface area and added barbs. See the independent test chart results and pictures below.
